

Dear FCC,

SAVI Technologies is requesting the use of radio frequencies that are already allocated to licensed radio service for the purpose of emergency RF communications and experimentation.

SAVI Technologies is also trying to address an issue that falls appropriately into the category of Part 15 "Device Regulations." The additional frequencies that they are requesting use of are not necessary because adequate spectrum has already been set aside for items defined as an "industrial/medical device." Consequently, if RM-10051 is approved it will cause an indirect amendment to Part 15 Device Regulations regarding RFID's that goes against your own guidelines.

A reply would be appreciated.

Sincerely,  
Gay L. Borgenhagen
